

- **Filename:** the name of this file indicates that this PDF contains the documentation information of environmental air data (EAD) captured at a CAPTOR node identified as Node-ID 34, deployed in the Italian testbed in the 2017 campaign.
- **Project information:** CAPTOR project is funded by the European Union's Horizon 2020 Programme under the Grant Agreement No. 688110, www.captor-project.eu
- **Contact of the responsible of the dataset:**
 - CSIC: Mar Viana, mar.viana@idaea.csic.es, tf:+34 93 400 61 26
 - UPC: Jose M. Barcelo-Ordinas, joseb@ac.upc.edu, tf: +34 93 405 40 51
- **Description of the content of the data set:** the data set contains ozone calibrated data of a captor node located in a volunteer's house during the 2017 summer campaign.
- **Testbed location description:** The testbed was found in the Piemonte-Lombardia-Elilia Romagna-Veneto region, a rural/suburban region in the north of Italy, at the Pianura Padana Vally.
- **Node ID:** 17034
- **Location of the node:** Pontenure (Elilia Romagna)
- **Technical information of the node:** specific information of the node:
 - number and type of sensors in the CAPTOR node: 4 SGX Sensortech MICS 2614 metal-oxide O3 sensors, 1 MQ131 metal-oxide O3 sensor, 1 Temperature/Relative humidity sensor (DHT1) Grove - Temp&Humi sensor,
 - Information of calibration: the calibration of this node was performed applying a Multiple Linear Regression model to a training and validation set. The model consists of:
 $y \sim b_0 + b_1 x_1 + b_2 x_2 + b_3 x_3$, where y is the reference station data, x_1 the values measured by the O3 sensor, x_2 the values measured by the temperature sensor and x_3 the values measured by the relative humidity sensor.
 The calibration coefficients $\{b_0, b_1, b_2, b_3\}$ were calculated during a calibration period (06-25/07/2017) in the reference station of Monte Cucco. Additional information on the procedure to calibrate the node can be found in CAPTOR deliverable 2.3. "Software tool for Ozone Concentration Estimation Development",
 - Root Mean Square Error (RMSE) obtained in the calibrated process defined as the square of the Mean Square Error of the testing data set with respect the reference values. $RMSE = 16.0736(\mu g/m^3)$
 R^2 (Coefficient of Determination) measures the proportion of variability in Y that can be explained using X and it is bound between 0 and 1. When R^2 is close to 1 it indicates that a large proportion of the variability in the response has been explained by the regression. $R^2 = 0.9004$
- **Dates of the campaign:** this node was in a volunteer's house from 25/07/2017 to 02/09/2017
- **Duration of the campaign:** 38 days
- **Length of the data size:** 1893 samples (rows) of the data set
- **Rights:** The results and methods in this dataset are property of the CAPTOR consortium. Any use of the data should be notified and acknowledged to the CAPTOR project.
- **Description of the data set file:** the data set file `DataSet_Italy_EAD_Node-ID34_2017.csv` contains (columns): `Start_local` (local date and time at which the sensors started monitoring), `End_local` (local date and time at which the sensors ended monitoring), and `Ozone` (averaged ozone concentration in $\mu g/m^3$); (rows): samples.
- **Additional information (optional):** none
