

- **Filename:** the name of this file indicates that this PDF contains the documentation information of environmental air data (EAD) captured at a CAPTOR node identified as Node-ID 22, deployed in the Spanish testbed in the 2017 campaign.
- **Project information:** CAPTOR project is funded by the European Union's Horizon 2020 Programme under the Grant Agreement No. 688110, [www.captor-project.eu](http://www.captor-project.eu)
- **Contact of the responsible of the dataset:**
  - CSIC: Mar Viana, [mar.viana@idaea.csic.es](mailto:mar.viana@idaea.csic.es), tf:+34 93 400 61 26
  - UPC: Jose M. Barcelo-Ordinas, [joseb@ac.upc.edu](mailto:joseb@ac.upc.edu), tf: +34 93 405 40 51
- **Description of the content of the data set:** the data set contains ozone calibrated data of a captor node located in a volunteer's house during the 2017 summer campaign.
- **Testbed location description:** The testbed was found in the Barcelonès-Vallès Oriental-Osona (Catalonia, Spain) a rural/suburban region in NE Spain located 60-70 km from a major urban area (Barcelona).
- **Node ID:** 17022
- **Location of the node:** Llinars del Vallès (Vallès Oriental)
- **Technical information of the node:** specific information of the node:
  - number and type of sensors in the CAPTOR node: 4 SGX Sensortech MICS 2614 metal-oxide O3 sensors, 1 MQ131 metal-oxide O3 sensor, 1 Temperature/Relative humidity sensor (DHT1) Grove - Temp&Humi sensor,
  - Information of calibration: the calibration of this node was performed applying a Multiple Linear Regression model to a training and validation set. The model consists of:  
 $y \sim b_0 + b_1 x_1 + b_2 x_2 + b_3 x_3$ , where  $y$  is the reference station data,  $x_1$  the values measured by the O3 sensor,  $x_2$  the values measured by the temperature sensor and  $x_3$  the values measured by the relative humidity sensor.  
 The calibration coefficients  $\{b_0, b_1, b_2, b_3\}$  were calculated during a calibration period (08-30/05/2017) in the reference station of Tona. Additional information on the procedure to calibrate the node can be found in CAPTOR deliverable 2.3. "Software tool for Ozone Concentration Estimation Development",
  - Root Mean Square Error (RMSE) obtained in the calibrated process defined as the square of the Mean Square Error of the testing data set with respect the reference values.  $RMSE = 12.6784 \text{ } (\mu\text{g}/\text{m}^3)$   
 $R^2$  (Coefficient of Determination) measures the proportion of variability in  $Y$  that can be explained using  $X$  and it is bound between 0 and 1. When  $R^2$  is close to 1 it indicates that a large proportion of the variability in the response has been explained by the regression.  $R^2 = 0.8585$
- **Dates of the campaign:** this node was in a volunteer's house from 09/06/2017 to 22/09/2017
- **Duration of the campaign:** 106 days
- **Length of the data size:** 5035 samples (rows) of the data set
- **Rights:** The results and methods in this dataset are property of the CAPTOR consortium. Any use of the data should be notified and acknowledged to the CAPTOR project.
- **Description of the data set file:** the data set file DataSet\_Spain\_EAD\_Node-ID22\_2017.csv contains (columns): Start\_local (local date and time at which the sensors started monitoring), End\_local (local date and time at which the sensors ended monitoring), and Ozone (averaged ozone concentration in  $\mu\text{g}/\text{m}^3$ ); (rows): samples.
- **Additional information (optional):** none
